

## Medical Coverage Policy | Thoracic-Lumbo-Sacral Orthosis with Pneumatics

**EFFECTIVE DATE:** 03 | 01 | 2012  
**POLICY LAST UPDATED:** 10 | 08 | 2021

### OVERVIEW

Thoracic-lumbo-sacral orthosis (TLSO) with pneumatics consists of a vest with inflatable inserts. Inflation of these expandable inserts and pressure are controlled by the patient. The device is used to unload body weight from the spine onto the iliac crests.

### MEDICAL CRITERIA

Not applicable

### PRIOR AUTHORIZATION

Not applicable

### POLICY STATEMENT

#### Medicare Advantage Plans

Thoracic-lumbo-sacral orthosis incorporating pneumatic inflation is not covered as the evidence is insufficient to determine that the technology results in an improvement in the net health outcome.

#### Commercial Products

Thoracic-lumbo-sacral orthosis incorporating pneumatic inflation is considered not medically necessary as the evidence is insufficient to determine that the technology results in an improvement in the net health outcome.

### COVERAGE

Benefits may vary between groups/contracts. Please refer to the appropriate Benefit Booklet, Evidence of Coverage, or Subscriber Agreement for applicable not medically necessary/not covered benefits/coverage.

### BACKGROUND

A variety of back supports or braces are designed to offer stabilization and decompression as a conservative treatment for pain related to spinal disc disease and/or joint dysfunction. An orthotic that includes a pneumatic component has become commercially available, the Orthotrac Pneumatic Vest™ (manufactured by Kinesis Medical, Minneapolis, MN). Orthofix, Inc. acquired Kinesis Medical in 2000.

The pneumatic component is inflated by the patient and is designed to lift the patient's body weight off the spine and relieve intervertebral compression. The orthotic is designed to be worn intermittently throughout the day.

As with any therapy for pain, placebo-controlled trials are particularly important to document the extent of the expected placebo effect and to determine the independent contribution of the therapy itself. While the lack of published studies does not permit scientific conclusions about a pneumatic lumbar orthosis alone or in comparison to other types of back orthoses, it should be noted that the literature regarding back braces and supports is, in general, of poor quality. A meta-analysis of lumbar support devices reported that there was limited evidence that lumbar supports are more effective than no treatment of low back pain and that it was unclear if lumbar supports are more effective than other interventions for treatment of low back pain.

The absence of controlled studies of TLSO with pneumatics precludes any conclusions regarding effectiveness for the treatment of low back pain; the device is considered not medically necessary as there is no proven efficacy.

#### **CODING**

The following HCPCS code is not covered for Medicare Advantage Plans and not medically necessary for Commercial Products:

**E0830** Ambulatory traction device, all types, each

This medical policy is made available to you for informational purposes only. It is not a guarantee of payment or a substitute for your medical judgment in the treatment of your patients. Benefits and eligibility are determined by the member's subscriber agreement or member certificate and/or the employer agreement, and those documents will supersede the provisions of this medical policy. For information on member-specific benefits, call the provider call center. If you provide services to a member which are determined to not be medically necessary (or in some cases medically necessary services which are non-covered benefits), you may not charge the member for the services unless you have informed the member and they have agreed in writing in advance to continue with the treatment at their own expense. Please refer to your participation agreement(s) for the applicable provisions. This policy is current at the time of publication; however, medical practices, technology, and knowledge are constantly changing.
