POLICY STATEMENT

Medicare Advantage Plans and Commercial Products

Radiopharmaceuticals are covered if used as part of a covered service. Many of these radiopharmaceuticals are used in conjunction with tests that require preauthorization through the BCBSRI Radiology Management Program vendor. If during the preauthorization process the test is determined to be not medically necessary, then the radiopharmaceutical is also not medically necessary.

COVERAGE

Benefits may vary between groups/contracts. Please refer to the appropriate Benefit Booklet, Evidence of Coverage, or Subscriber Agreement for diagnostic imaging, lab, machine tests and therapeutic radiology coverage/benefits.

BACKGROUND

Radiopharmaceuticals are drugs that contain radioactive materials called *radioisotopes*. They may be put into a vein, taken by mouth, or placed in a body cavity. Depending on the drug and how it's given, these materials travel to various parts of the body to treat cancer or relieve its symptoms. They put out radiation, mostly in the form of alpha and beta particles that target the affected areas. They are most often used in small amounts for imaging tests, but larger doses can be used to deliver radiation.

CODING
