Medical Coverage Policy

Microwave Tumor Ablation

☐ Device/Equipment ☐ Drug ☐ Medical ☐ Surgery ☐ Test ☒ Other

Effective Date: 7/1/2012  Policy Last Updated: 3/6/2011

☐ Prospective review is recommended/required. Please check the member agreement for preauthorization guidelines.

☒ Prospective review is not required.

Description:
Microwave ablation (MWA) is a technique in which the use of microwave energy induces an ultra high speed, 915 MHz or 2450MHz (2.45GHz), alternating electric field which causes water molecule rotation and the creation of heat. This results in thermal coagulation and localized tissue necrosis. In MWA, a single microwave antenna or multiple antennas connected to a generator are inserted directly into the tumor or tissue to be ablated; energy from the antennas generates friction and heat. The local heat coagulates the tissue adjacent to the probe, resulting in a small, approximately 2-3 cm elliptical area (5 x 3 cm) of tissue ablation. In tumors > 2 cm in diameter, 2-3 antennas may be used simultaneously to increase the targeted area of MWA and shorten operative time. Multiple antennas may also be used simultaneously to ablate multiple tumors. Tissue ablation occurs quickly, within one minute after a pulse of energy, and multiple pulses may be delivered within a treatment session depending on the size of the tumor. The cells killed by MWA are typically not removed but are gradually replaced by fibrosis and scar tissue. If there is local recurrence, it occurs at the edges. Treatment may be repeated as needed. MWA may be used to: 1) control local tumor growth and prevent recurrence; 2) palliate symptoms; and 3) extend survival duration.

Complications from MWA are usually considered mild and may include pain and fever. Other potential complications associated with MWA include those caused by heat damage to normal tissue adjacent to the tumor (e.g., intestinal damage during MWA of the kidney or liver), structural damage along the probe track (e.g., pneumothorax as a consequence of procedures on the lung), liver enzyme elevation, liver abscess, ascites, pleural effusion, diaphragm injury or secondary tumors if cells seed during probe removal. MWA should be avoided in pregnant patients since potential risks to the patient and/or fetus have not been established and in patients with implanted electronic devices such as implantable pacemakers that may be adversely affected by microwave power output.

Based on review of the published data (which consists largely of small case series and limited randomized trials) and clinical input, there is insufficient evidence to permit conclusions concerning the comparative effectiveness of microwave ablation (MWA) to other ablative techniques on health outcomes. Therefore, MWA of hepatocellular carcinoma, liver metastases from primary cancers from other sites, renal cell carcinoma, other renal tumors and all other tumors is considered not medically necessary.

Medical Criteria:
Not applicable.

Policy:
Microwave tumor ablation is not medically necessary for all product lines due to insufficient published, peer-reviewed scientific literature that demonstrates microwave ablation is superior to other types of ablative treatments.
NOTE: This policy addresses noncancerous tissue, not tumor(s).

Coverage:
Benefits may vary between groups/contracts. Please refer to the appropriate evidence of coverage, subscriber agreement, or benefits booklet for applicable not medically necessary coverage/benefits.

Coding:
There are no specific CPT codes for this procedure and therefore unlisted codes such as the following should be used:

19499
47399
53899

Publications:
Policy Update, May 2012

This medical policy is made available to you for informational purposes only. It is not a guarantee of payment or a substitute for your medical judgment in the treatment of your patients. Benefits and eligibility are determined by the member’s subscriber agreement or member certificate and/or the employer agreement, and those documents will supersede the provisions of this medical policy. For information on member-specific benefits, call the provider call center. If you provide services to a member which are determined to not be medically necessary (or in some cases medically necessary services which are non-covered benefits), you may not charge the member for the services unless you have informed the member and they have agreed in writing in advance to continue with the treatment at their own expense. Please refer to your participation agreement(s) for the applicable provisions. This policy is current at the time of publication; however, medical practices, technology, and knowledge are constantly changing. BCBSRI
reserves the right to review and revise this policy for any reason and at any time, with or without notice.
